Allowable Subject Matter

Claims 1-2 are allowed over the prior art.

The following is an examiner's statement of reasons for allowance: the most relevant references Bock et al. (US 4,313,155), Inou et al. (US 4,685,039), and Luettich (DE 2819676 A1) each disclose a DC to DC converter that balances the voltages of a series connection of capacitors having at least two intermediate circuit capacitors connected in series over an intermediate circuit voltage, capacitor-specific controlled oscillating inverters whose input poles are connected in parallel with the capacitor corresponding to the inverter and the output poles of which are connected in parallel to provide a voltage source, and the capacitor specific controlled oscillating inverters are adapted to balance the voltages of the capacitor supplied by access to energy stored therein to thereby provide voltage to the output

Neither Bock nor Inou nor Luettich disclose using capacitor-specific freely oscillating inverters to balance the voltages of the series connected capacitors. Further the replacement of the disclosed controlled oscillating inverters with freely oscillating inverters would render the DC to DC converters inoperative for their intended purpose of providing a regulated DC output because freely oscillating inverters produce an unregulated output voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
